Hi Ed –

I am planning a site visit to the Nuclear Metals site tomorrow morning, but wasn't explicitly planning a stop in Hopedale. I can consider a visit to Hopedale one day in the next week or two, but tomorrow afternoon I have packed calendar.

The attached image shows the extent of the release. As you can see it was location adjacent to the railcar, on the tracks and very localized. The area was remediated on Friday morning (11/18/22) by US Ecology.

**Subject:** Conservation Committee ?s

Hi Kara,

As a Zone II the Conservation Committee will need further information. See below.

While in Hopedale tomorrow, can you please make some time to meet in person for a few minutes?

Thanks  
Ed

ConCom will need to know the answer to the following questions:

1. How far away, in feet, was the spill from the Mill River
2. How far away, in feet, was the spill from the wetlands located behind 127-129 Mendon Street (Route 16).
3. Was any of the spill located within the FEMA regulated floodplain located on the property.
4. Did any of the material fall into the Mill River or the wetlands listed.

Thank you,  
-Becca Solomon
